

The Problem

The Solution

# Triplex™ Liner Process—Sustainable 100-Year Solution

*We measure each structure for a custom liner.*

*Liner is inspected at the jobsite to verify correct fit.*

*Manhole to be lined has failed rehab materials.*

*Structure is pressure cleaned; pipes are trimmed & grouted.*

*Epoxy saturated liner is ready to be lowered into place.*

*The liner is in place, under pressure and steam curing.*

*Inflation Bladder is being stripped from the cured liner.*

*The sewer lines are reopened and ready for immediate use.*

*“After” shows the big difference a Triplex Liner makes!*

***“Do it once and you’re through—and that’s mighty good!”***

Ron McNeil

**How long do you want your man-hole rehab to last... 5, 10, 15 YEARS?**

*For more than thirty years, I have endeavored to design and build a product that would truly solve the costly and serious problem of deterioration and infiltration in manholes—not just cover it up! One that would last 50-100 years in the harsh wastewater sewer environment.*

*The Triplex Liner is that product.*

**100% MADE IN THE USA**

**Installed: 8/8/1993**  
**SunCoast Environmental International, Inc.**

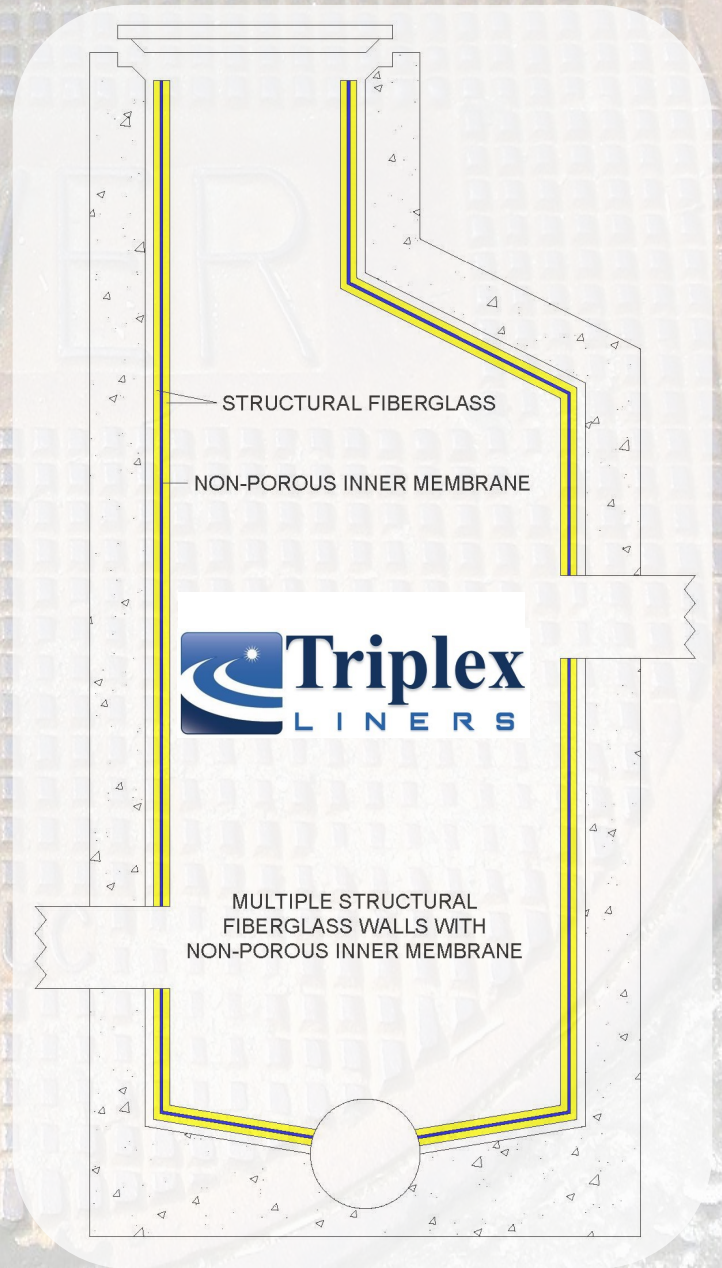

**Inspected: 10/14/2020**  
**Dirty but still working!**  
**27 YEARS LATER**

## McNeil Technologies Inc. produces liners for all your rehabilitation needs!

- UniPlex-2400**     *Rehabilitation with no Active Infiltration or Preventive Maintenance.*  
Structural fiberglass and epoxy resin. Stronger and more permanent than spray-on coatings.  
**Five (5) Year Warranty.**
- DuPlex-4800**     *Rehabilitation with Deterioration and no Active Infiltration*  
Structural fiberglass liner for primary rehab. All infiltration present must be stopped prior to installation.  
Bonded to the host structure with epoxy resin. Stronger and more permanent than spray-on coatings.  
**Ten (10) Year Warranty.**
- Triplex-6800**     *Rehabilitation with Deterioration and Active Infiltration*  
Flagship liner includes non-porous barrier. Stops infiltration and deterioration. May be installed where active infiltration is present. **Twenty (20) Year Warranty.**
- Triplex-9200**     *Rehabilitation 30' and beyond with Deterioration & Active Infiltration*  
Designed for installation in structures 30 Ft. deep and beyond or for severely deteriorated structures in heavy truck traffic areas. **Twenty (20) Year Warranty.**
- Triplex-11600**     *Rehabilitation 60' and beyond with Deterioration & Active Infiltration*  
Designed for installation in structures beyond 60 Ft. deep or for structures where structural integrity is questionable. **Twenty (20) Year Warranty.**

***Before and after tell the story best!***
